## Database Extraction

*In spite of ourselves, we have become  
experts on the export of data to  
HL7 and ANSI837*

## Extract Public Health data to HL7 &/or ANSI 837

Do you need to send out data as HL7 or billing in ANSI837 format?

Is your IT department or LIMS vendor dragging their feet giving you the routines you need?

*BtB Software may have the solution to rapidly complete your project.*

We have become experts in extracting and parsing data to meet the transports standards for HL7 (any flavor) or ANSI837 for billing to one or many public/private entities (State, CDC, MediCare, Private Insurance).

### **We supply:**

A stand-alone application (Visual Studio.Net 2008) to extract data and parse it to both a SQL database for permanent storage and a flat (formatted) file to send.

### **You Supply:**

Sample data, table definitions, read-only access to your database and staff to press the button!

### **Cost:**

Since each situation is different, costs will have to be determined based on desired end product(s), complexity and accuracy of the source database and the support available to access the database. We will make every effort to work within your current budget restrictions.

**Also available:** a full Accounts/Receivable program that can read, track and report ANSI835 data.
